Abstract

(A) The title of this article is taken from the Note Book of Mark Twain (1835-1910), an American writer. There are actually many well-known philosophers, academicians, and politicians in the western world, who also have said very similar statements, and we will mention some of them in this article. Our objective in this article is to find out how these various intellectuals arrive at this similar conclusion. Therefore, this is a multidisciplinary research and review paper. It tries to minimize discussions on truths, also mathematics will be avoided to reach a broader community, and it presents mostly about the falsehoods as the title suggests. (B) Our approach has two major principles. First one is that if there are assumptions behind any subject and those assumptions have not been verified then that subject must be wrong. All the results of that subject are nothing but only assumptions. The second one is that no engineering experiment can verify any results. This is so because any engineering experiment will automatically reject all assumptions, as engineering is nothing but nature only. Thus even if the results of the experiments match the results of the theories they still cannot be trusted, because the theories are invalid without their assumptions. (C) Destiny law says that the universe is periodic. Our history shows that there are many small and large periodic time cycles of events on earth. The Yuga theory is one of the larger periodic laws. There are four Yugas: Sattya, Treta, Dwapar, and Kali. In the western world these are known as Gold, Silver, Bronze, and Iron ages respectively. Sattya Yuga is the longest: 1,728,000 years and starts with 100% truth. Kali Yuga is the shortest: 432,000 years and starts with only 25% truth. We are in the Kali Yuga now, and it started about 10-30 thousand years back. That is the modern estimate of the end of the Mahabharat war. After Kali, Sattya will start again, says Mahabharat, with 100% truth and the four-Yuga cycle will begin. Thus at one time our earth had all the truths that we can think of, but now they are going down. UFO-ETs are probably from the planets which are now in their Sattya Yuga or at least not in their Kali Yuga. The Yuga theory is described both in the Vedas and in the Bible. (D) There may be many other reasons, that these philosophers knew, which helped them to create such wisdom for us to consider, evaluate, and learn. In this article we will try to identify such philosophies to defend the title message. Who or what is responsible, for this dismal state of the earth? The fact is nobody, not even the destiny, is responsible. Universe is deterministic. Moment by moment everything is precisely planned and predictable. Therefore God does not have any role in the universe and in our lives. God cannot be predictable by humans. Birth-death-wait- and then reincarnate is the only law of nature for everything, from micro to the universe. The death means deterioration of everything. This is how the universe is

designed, and this periodicity is going on for eternity. A careful observation of a single individual human life will convince you about this universal phenomenon.

Keywords: *Destiny; Eternal Recurrence; Yuga Theory; Truths; Memory; Knowledge; Yogic Power; Democracy; God; History*

1.0 Introduction

It must be very mysterious to find out how Mark Twain came to such a remarkable wisdom – “The majority is always in the wrong” [Twain: 393]. What kind of experiences and thought processes in life can lead to such a conclusion described by this title message? When we meet UFO-ET humanoids, our lives can completely change, because they can alter our spirituality, particularly when we are in the Kali Yuga. But such an encounter probably did not happen to Mark Twain. However, he came in contact with an astrologer palmist who predicted very precisely about his financial future.

The well-known western palmist, Cheiro, examined the hands of Mark Twain in 1895, when Twain was bankrupt and \$94,000 in debt. Cheiro predicted that he would suddenly become rich in his 68th year (1903). It came true and he signed a contract. Twain wrote - “They guarantee me \$25,000 a year for five years, but they will yield twice as much as that for many a year, if intelligently handled” [Twain: 381]. Such an encounter, that the life is so precisely predictable and guided by destiny, can dramatically change everything about the materialistic view of life. He felt, there must be something else that is so true.

Nietzsche - Spirituality is the most important quality of human life. It is described in all the ancient books of all nations on the earth, but has vanished from modern science. German Philosopher Friedrich Nietzsche, the best philosopher of the west, said “But an essentially mechanical world would be an essentially meaningless world” [Nietzsche, 1910: 339]. He is the best because his understanding of the soul theory is very best in the west.

God - Bible says “God is spirit.” This statement is explained in details in Vedas - You have a soul (spirit) inside your body, that soul has created or manufactured your body, and according to your destiny. We give an observational physical example. Therefore that spirit is your god. Similarly, I have a spirit, which is my god. That same individual soul controls our bodies, moment by moment for all the time and for eternity. You never die, you always reincarnate, and there is no stopping of the reincarnation also. Soul is a tiniest invisible particle, it is eternally existent, and it is the only thing that is conscious and intelligent [Das, 2022]. Such knowledge of truths can change everything upside down.

Samkhya - We should not think that our ancient books are wrong. They were written in Sattya Yuga when truth was 100%. These books are written by seer yogis; they are the highest level yogis. Their books represent the most authentic truths. There are such yogis even today and they can see Vedas now using their third eye vision [Das, 2020b]. Thus not anybody can write Vedas, and therefore not everything that is written in Vedas is Veda. For example all of the Upanishads are wrong; they are not only self contradictory, they contradict the Samkhya (soul) theory also. Mahabharat says Samkhya has the highest knowledge. Almost 60% of Gita is taken from Samkhya. Since Bible has all the major ideas of the Vedas [Das, 2022], we can say that there was a time when the entire earth knew the Vedas. Vedas are like the internet; the internet has all the truths, because it contains Vedas, but it has all the wrong things also, and by design. Only truth seekers will be able to filter the searches [Das, 2019].

Principles - As we have mentioned in the abstract we will use two principles to prove our title. We will show that (1) all subjects are based on assumptions. Since assumptions cannot be verified therefore those subjects must be false. Moreover, the second principle says, (2) if the engineering

experiments show correct results that will still not prove the theory, because the assumptions were rejected by the experiments [Das, 2014a]. Engineering also introduces its own assumptions. It is quite obvious, that if you do the same thing in the same way, then you will always get the same results, no matter how many times you repeat the process. It will not prove the truth of the theory. Wrong theories will also show the same wrong results. We will also use a (3) third principle, called the root cause principle. Every cause and effect chain will have a root cause. We will find that this root cause will always be the same for all activities. If we can show that the root cause is false then all the effects or results must become wrong or false.

Why So – Galileo was jailed for discovering the truth. As a consequence of this Galileo phenomenon [Das, 2014b], we see that so many western and eastern philosophers have said the same thing: Mark Twain said – Majority is always in the wrong; Rabindranath Tagore said Sab Jhut hai – Everything is false [Tagore: Khudito Pasan]; Ayn Rand said – The truth is not for all men, but only for those who seek it [Rand]; Carroll Quigley said – education is false; Keynes said – not even one man in a million knows how economy works; in The King of Diamonds, Satyajit Ray says that – close down the schools, burn all the books. Bertrand Russell said: mind does not know anything; Nietzsche said that – Universe will be meaningless without the soul theory. The references for the above quotes are mentioned in this article. Thus nobody will tell the truth anymore and therefore everything must be wrong. Kali Yuga ends with 0% truths.

Contents - The rest of the article has the following contents: 2.0 Definition of truth is missing, 3.0 Examples of truths, 4.0 Eternal recurrence, 5.0 Destiny and corporation, 6.0 Mathematics is wrong, 7.0 Physics is wrong, 8.0 Economics is wrong, 9.0 Destiny, periodicity, and Yuga theory, 10.0 Education is wrong, 11.0 Engineering is wrong, 12.0 Upanishads are wrong, 13.0 Karma Theory is wrong.

2.0 Definition of Truth Is Missing

Truths cannot be discussed in the Kali Yuga. Everything must be made very complicated and confusing so that nobody can figure out what we are talking about. Modern societies therefore do not have a definition of truth. If you talk about the truth then you will be jailed, and is known as the Galileo phenomenon. Every government spends lots of efforts to create and spread misinformation and disinformation, on our earth, at this time of Kali Yuga. Kali means dark, or black, or the age of ignorance. This age starts with 25% truths and will end with zero truth, before Sattya Yuga starts again with 100% truths.

2.1 Dictionary Does not Have a Definition

The Merriam Webster dictionary says – “Essential meaning of truth: a statement or idea that is true or accepted as true”. This has two problems – it defines truth in terms of true. It also says “accepted as true.” That is, if you accept it then it is a truth for you, and if I do not accept it then it is not a truth for me. This essentially means “you have your own truth and I have my own truth”. If this is the situation, then Galileo would still remain in jail. There will be wars everywhere. This definition is clearly not acceptable and therefore is wrong. Truth cannot depend on humans. Truth must be unique, universal, and eternal.

2.2 Correspondence Theory Is Wrong

Correspondence theory of truth says that there must be a fact in correspondence with the subject matter. The fact is an event that has happened in nature.

In his article “TRUTH AND FALSEHOOD”, Bertrand Russell, a Nobel Laureate in literature (1950) says, three requirements must be satisfied: (1) The theory of truth must be such as to admit of its

opposite, falsehood. (2) It seems fairly evident that if there were no beliefs there could be no falsehood, and no truth either, in the sense in which truth is correlative to falsehood. (3) It is to be observed that the truth or falsehood of a belief always depends upon something which lies outside the belief itself [Russell].

In “THE VALUE OF PHILOSOPHY” article Bertrand Russell contradicts item (1) above. And he is correct; there are no opposites in nature. “Philosophic contemplation does not, in its widest survey, divide the universe into two hostile camps--friends and foes, helpful and hostile, good and bad--it views the whole impartially.” Item (2) is equally false, truth cannot be linked to human beliefs. This becomes same as the Merriam Webster dictionary definition. Item (3) contradicts item (2) – “Truth depends on something outside the belief” [Russell].

Thus the correspondence theory of truth seems to collapse. This has happened because this philosophy ignores the soul theory. Soul theory says there is no good and bad, everything is destiny, or planned. Thus we can see Nietzsche becomes correct again, he says, as mentioned before – “An essentially material world is essentially a meaningless world”.

2.3 Definition of Truth – We found that the definition of truth is missing from the mainstream. This is natural, because Kali Yuga by definition starts with only 25% truths and eventually it will end with zero truths. However the title message will still remain valid, there will still be some people who will know the truths. We will try to minimize our discussions on truths because this article is all about falsehoods.

It is easy to realize that truths are unique, universal, and eternal. Since every object in the universe has a soul, therefore every object is conscious, and therefore such definition of truth must be neither objective nor subjective. The most important characteristic of all truths is that all truths are observable. This is so because universe is full of souls and they do not deprive them from helping us. An obvious example of such a truth is death. For more details on this definition you may want to take a look at [Das, 2021]. Gravity for example, is not such a truth, because we know humans can levitate and move above the ground. Thus we state the following definition of truth.

T1: “(1) The laws of nature are the only truths. (2) These laws are created by the objects of nature and their characteristics. (3) Nature always demonstrates all its truths.”

3.0 Examples of Truths

We show some examples to illustrate how different is the truth of the universe when you consider the soul theory. These examples should also surprise us at the same time and point out that how wrong our society is, and will remain so wrong, if we think of material only world. This soul theory is therefore another principle for our article that will tell us why everything is wrong. Soul theory creates many other principles, like reincarnation, destiny, eternal recurrence, yogic power, memory in the universe, etc., which provide many long term and invisible reasons that make the understanding of our life wrong.

3.1 Memory Is Not Inside the Brain

Catherine was treated by Dr. Weiss (1944-), Head of Psychiatry at the Mount Sinai Medical Center in Miami, Florida, using past life regression therapy (PLR) by hypnosis. Hypnosis is nothing but a method of an extraordinary level of mind concentration. Such concentration can generate yogic power of third eye vision that enables to examine one’s own past life activities from the memory in the universe. Going through many sessions of hypnosis Catherine acquired the third eye power in other areas also.

She picked winners for every race in the racetrack, to demonstrate her yogic power, to her skeptic father. Dr. Weiss also went with them. She gave away all the money to the first poor man she found on the street on her way out of the track. Dr. Weiss wrote, ‘I was both shocked and fascinated by her psychic

abilities, especially the episode at the racetrack. This was tangible proof. She had the winning ticket to every race. This was no coincidence' [Weiss].

The above example shows that the third eye vision is not a fantasy, or magic. Even a modern person can acquire such yogic power [Das, 2020b]. With such a very strong yogic power, you will be able to see all the details about every event in nature like a 3D video. Yogis of Vedic period have already discovered all such results. Reincarnation is probably the greatest such discovery of the humanity.

This example of Catherine shows a principle that the memory is not inside our brain. This principle is not known to the medical science professionals and therefore many theories, treatments will be wrong for the society. Even the high court and Supreme Court rulings will be wrong because the soul theory is not known to them. All elected representatives must be familiar with the soul theory; people are electing them for proper judgment and services from them. A training scheme for the soul theory must be provided for every person in the administration.

3.2 We Are Created by Our Souls

The following example [Pasricha] was discovered, and then presented in a scientific way, to the western world by Ian Stevenson (1918-2007), a Professor of Psychiatry, at the University of Virginia in the USA. This example shows that the nature always demonstrates all its truths, so that we can observe them and learn from them, for our own emancipation. We do not need to speculate using assumptions and create philosophies about the nature. Such examples were already known by the humanity all over the world, and for centuries. Thus we should not disregard the value of ordinary people. It is similar to rejecting the UFO observations by ordinary public; or punishing researchers for discovering the truth.

A baby boy was born in a hospital, with a bullet wound marks on his chest and back. Doctors, nurses, and parents, all recognized this birth marks. When the boy learned to talk, around the age of two, then over a year or so he explained how the marks happened in his body. He remembered and described his past life name, how, when, and where he died, including the name of the hospital, etc. Very soon the boy became sick and had to go through a surgery to save his life. Doctors found a straight line bullet path inside the baby's body matching the autopsy record of his previous life data, from the hospital where he died in his past life.

The above example shows, among other things, that the following are true. (a) The babies are not naturally grown inside the mother's womb. The soul of the baby manufactures the human body according to its own destiny. That is why every baby is different, both physically and mentally. (b) Since during the growth period, there was no brain for the baby, all intelligences and effects came from the memory of the universe and retrieved by the soul of the baby, which is the creator of that baby. The phenomenon should also indicate that mind, soul, and memory are not inside the human body. (c) Every life is periodic - we take birth, die, and reincarnate. Since summation of periodic waves will be periodic, therefore the entire universe must be periodic. Bible also says, "Whatever has happened will happen again; there is nothing new under the sun" [Bible: Ecclesiastes 1:9]. Thus we should not ignore the ancient books. Only these books can have the truths; therefore modern books cannot have any truth. Truth must be unique.

3.3 Observation Is Incremental

Consider a thought experiment of observing a dice. If we see a dice directly, perpendicularly to a surface, we will see the dice as a square plate with a number written on it. We can stop here and we may feel satisfied that the object was a square plate, and remain happy with our understanding of that truth. However, if you see from an angle, you will find it has two square surfaces with two different numbers. Your understanding has significantly changed now. You can then look at the top and at the bottom and you will learn that the dice has six faces and is like a cube with different numbers in each face. You can increase your curiosity, and decide to cut the dice at any angle and see a sectional view to find that it may

have a cylinder inside it. Thus more you do your research more you find the hidden treasures in the object.

If instead of the dice, we may try now with an elephant [Das, 2014b], then you will find that the elephant has a memory, and that the memory is not inside its brain, and you will be able to read that memory also. More research will show you that the elephant also reincarnates. Such knowledge cannot be acquired using ordinary eyes or any technology and not even with AI. You must become a yogi and acquire the third eye vision as described in Vedas and Bible, see [Section 3.1](#) above.

You can continue your research but the process will end within a finite iteration, because nature is finite, in duration, quantity, and in quality. Destiny is a law of quality, but the events and their durations in the universe are finite. Thus infinite dimensional space, like the space of continuous functions, is nonexistent in nature [Das, 2022]. Sampling concept is invalid for nature, cannot be represented by real numbers, and also their total number must be finite. Since all objects are moving, there is no geometry in the universe. As we have mentioned, mathematics is no good for nature and engineering. Real numbers and real lines are nonexistent for nature and engineering. Do you see that the word real has been used to keep us ignorant?

4.0 Eternal Recurrence

Eternal recurrence is another principle, such that if you do not use it for the design of your system, then your system will be wrong. So we should understand this law of nature carefully and understand how to use it.

The Biblical statement, “There is nothing new under the sun [Bible: Ecclesiastes 1:9].” is also known as the conservation law of nature in physics. We will find that the entire physics is wrong, but only this conservation law is correct. This has happened because it was written in the ancient time, in sattya yuga, using the power of seer yogis. Conservation law says – you cannot create or destroy anything. Everything forever exists. You may find something new at this place and at this moment, but if you change the time scale or the space scale, you will find that the new thing has already happened somewhere else at some other time.

The entire universe repeats in every 8.6 billion years or so. According to Nietzsche this repetition will be exact also. That means I will be writing this exact same thing, at this same exact place, 8.6 billion years later, and I did that same thing 8.6 billion years in the past. So there is nothing new, but you will definitely find similar things at much smaller time periods also. Time gap will depend on the nature of things.

Both Nietzsche (1844-1900) [Nietzsche, 1911, p149] and Vivekananda (1863-1902) [Vivekananda, 1907, p585] provided the following logic to justify the concept of eternal recurrence. Universe is finite; there are a finite number of dust particles, from which all objects are created. Since all objects have finite size also, therefore when you create things of finite size from a finite collection, after some combinations things will repeat. But the nature is not that simple.

These dust particles, also called primordial matter, or simply matter particles, have three properties, called knowledge, ignorance, and energy. These are analog properties and the soul can adjust them continuously to create different emotions in life, thus they make our destinies different. Same person cannot have identical destiny at any two different times. Thus the recurrences will not be exactly same.

These eternal recurrence phenomena prove that none of the things that happened and documented in Vedas and Bible is myths and should be discarded. Such a method will keep us ignorant only. Everything that has happened, for example, in Ramayan is happening now also. Thus the stories are real

and actually happened. More specifically, the yogic power examples of Exodus in Bible, like Ocean divided in parts, is real and can be made to happen or will happen again. In a similar way, everything that is happening now must have happened and documented in these ancient books. So we must trust the ancient books and follow them.

One of the consequences of this conservation law is that the Patent law is wrong. Those who claim that their research paper is new, is also false. If you search carefully you will always find the subject matter existed before, on earth or somewhere in other planets. We have so much antagonistic feelings, with our patents, between nations, corporations, scholars are clearly baseless. This is valid for both truths and falsehoods also.

4.1 Things Were Not Wrong Before

The concept of eternal recurrence shows that we are wrong only now. In Sattya, Treta, and Dwapar Yugas we were not wrong in everything. In Sattya Yuga we had 100% truth. Thus everything was right. Everybody at that time was a high level yogi. There were no money, no economy, no profiting, and no cheating, no poverty. Everybody got everything they wanted by using yogic power only. There were no sexual relation between men and women. They got children by willing it only. You can see that such incidents are happening even in Kali Yuga also, but very rarely. Samkhya was probably created during the early Sattya Yuga. Thus such books should be trusted, but not any books of Kali Yuga.

Eternal recurrence gives us another principle, things can and will repeat even for short and long time gaps. Our design of societies by ignoring this principle, like New World Order (NWO), may turn out to be wrong. The following examples show another very long time-gap for eternal recurrence. Such time gaps make them difficult to recognize as recurrences. In fact, complete annihilation of the universe, with a time gap of 8.6 billion years, is also an eternal recurrence. As Bible says, there is nothing new, so every event is a recurrence.

4.2 Examples of Eternal Recurrence

Ramayan and Mahabharat stories are two epic war stories in Vedas. They are both written, before the stories happened, by two different seer yogis, Valmiki and Byasdev, respectively. Such yogis cannot lie. They must meditate to achieve specific human characteristics and only then they acquire the third eye vision of this long time gap. You can see such features in Catherine of modern times. She gave away all the money she made from the race track to the first poor man she found at the exit of the gate. She did not use that power to earn more money to become the richest person on the earth. Moreover you can see most of the events in those epic stories are still happening today in modern times. But it took more than a million years of time gap to create such a combination of events to happen simultaneously in both stories and at the same time. Here are some similarity highlights of the two stories. More details can be found in the book [Das, 2014b].

Major events in both stories were started by two women, both were created by yogic power and not by sexual relation of parents. Their bodies were divine, like Krishna of Gita. Sita was Sri Ram's wife in Ramayan story and Draupadi had five husbands in Mahabhart story. Ramayan happened in Treta Yuga when 75% truth ruled and Mahabharat happened in Dwapor Yuga which started with 50% truth.

Ram was sent to forest for 14 years. Sita and Ram's brother accompanied him. Draupadi and his five husband were sent for 13 years for forest living. Sita was kidnapped by Ravan, the demon king. This created a war. Ram was helped by monkey race and bear race to defeat and kill Ravan. Rama was a highest level yogi. At the end of 13 years Krishna helped the five brothers to start a war against the king who exiled them to the forest. They all were defeated and the five brothers got back the kingdom. Here Krishna was a highest level yogi.

These were the highest level similarities or recurrences between the two stories. But there were many similarities at the detailed level also. There were conspiracies against Ram and Five brothers. The conspiracies were known by the majority of people of those families, but no one helped them. That ultimately led to wars and complete annihilation of the ruling powers. Annihilation was the major goal of both stories [Das, 2014b].

4.3 Eternal Recurrence in Kali Yuga

The kali Yuga started with 25% truth and will last several thousand years (432,000), and we are probably only at the beginning of this yuga, 10-30 thousand years, according to the modern estimate, as mentioned before.

WW1 was officially planned to create an earth with end of all wars. But that did not happen, very soon WW2 was started, in this war we dropped even an atom bomb. Many of the ruling dictators were removed to create democracies. But after about 75 years, according to the law of periodicity or reincarnation, all these dictators appeared again in all over the world and wars began again and are still continuing, in every continent, as of this writing. There is no reason to believe that wars will end permanently now; particularly when it appears that the wars are needed by the financial system also, as described in the section 8.0 on economics.

Thus the wars and poverty will be perpetuating at smaller and larger scales all over the world. It is a never ending process. At larger scale recessions will be created, major recessions will happen due to wars. Periodicity is the law of nature. As explained before money is the root cause for all calamities. Yet money is free and abundant, at its source, the central bank; and MLE (moneyless economy) can make people even richer than the present status. But it is the Kali Yuga, ignorance will rule, greed will dominate for several thousand years to come. Nobel Laureate in economics Milton Friedman said – “how to get rid of the central bank is an unsolved problem of the day” [Levy]. Friedman’s this statement alone justifies the title message of this article – majority is wrong.

5.0 Destiny and Corporation

5.1 Inside a Corporation

As we all know, we do not have any freewill and choices while working for a corporation. You must perform your specific task in a specific way and on a specific schedule. Only then your output will match with the product that your colleague will produce. And only then the corporation will work properly. If you know the entire schedule for the project then you will know who is working on what subject at any time. This is how the destiny works also at the level of the universe. There are people who can tell your activity at any time and at any moment of your life. Everything is predetermined and deterministic for all time, for eternity, for the entire universe.

Destiny is true for every Yuga. It does not matter if you know the truth or if you are ignorant; it does not matter if you are in Kali Yuga or Sattya Yuga. If you understand destiny concept properly, then you will never feel bad about anything, you will be always happy, nothing will affect you in any way. There is no good and bad in the universe; all are planned for everybody.

5.2 Definition of Destiny

Destiny means every event of every object in the universe is deterministic and predefined for eternity. It is written in the memory of the universe; and any high level seer yogi will be able to read that event exactly at any time, even before the event happens. The case of Catherine is a proof of destiny in modern time. Destiny is defined in the following way in Gita [Pravupada]:

[G.7.26] “O Arjuna, as the Supreme Personality of Godhead, I know everything that has happened in the past, all that is happening in the present, and all things that are yet to come. I also know all living entities; but Me no one knows.”

Here, Krishna, Arjuna, I, and Me can all be replaced by any soul, your soul or my soul, without changing the meaning of the verse. The verse is also affected by the destiny of the time. A Sattya Yuga soul, born in Kali Yuga, may behave differently according to the destiny of the Kali Yuga. Observe that God does not have any role in our life. Thus, moment by moment, destiny of any object depends on space, time, environment, individual destiny, and global destiny. Destiny cannot be same at any two moments for any object. Destiny therefore means no freewill and no choices. Destiny and God are contradictory concepts. Destiny can be predicted, but God by definition cannot be predictable. Destiny is also mentioned in the Bible.

6.0 Mathematics Is Wrong

Mathematics is a very pure subject. Money power has invested lot of money over many centuries to create a thoroughly and carefully defined, systematic, and precise subject. It helps to create an analytic mind. But this subject cannot be applied to nature and engineering, because of its assumptions. Applied mathematics is also very wrong and meaningless for applications. You cannot understand applied mathematics if you do not understand the pure mathematics. Foundations of mathematics are hidden from applied mathematics; even though they are covered in elementary schools.

The foundations of mathematics, the real numbers and straight lines, are assumptions and therefore false. They are not objects of nature. The entire mathematics subject is just the manipulations of these false assumptions, thus all theorems are false. As we have said before false cannot become true, no matter how well you try to hide them. Something is wrong means the subject will not work for nature and engineering. Engineering is nature, because it uses objects of nature. Engineering uses transistors, for example, which are made of materials from the earth. Mathematics violates the definition of truth T1. So the mathematics must be wrong.

6.1 Real Numbers Are False

If you write (M1): $1+2=3$, most people will understand its meaning. One orange plus two apples make three fruits. But to a mathematician M1 is a completely wrong application of mathematics. In mathematics, one, two, and three are real numbers. They are points on a real line, which is a straight line. And the numbers are at equal distances apart starting from the point zero. Thus addition is defined only for real numbers. Here only distances are added. Results of addition must be a real number, representing a distance. Thus apples and oranges cannot be added; even two apples cannot be added. No two apples are identical. The result of addition cannot be fruits; it must be a real number, representing a distance. There are many such properties for real numbers. Any textbook on real analysis will describe them [Bartle]. Thus M1 as defined above is not mathematics.

6.2 No Straight Line

There is no straight line in nature. Since all objects in the universe are moving continuously, no three points on a straight line can remain on that straight line for more than a moment. Thus the foundation of mathematics, a straight line, also called a real line, is not meaningful for nature. Since engineering uses objects of nature, and also interacts with nature, mathematics cannot be applied to describe both engineering and nature. Thus the fundamentals of mathematics violate the definition of truth, item two of T1 - both real numbers and the straight lines are not objects of nature. Therefore, mathematics is a false subject. Observe that the word real has been used to describe both the real number

and the real line, to hide the truth and create confusions. They are neither real nor objects of nature. Nothing in nature can be measured using real numbers.

Can you measure anything about an apple? What can you measure – color, shape, taste, weight, mass, location of a point on its surface? No, none of these can be measured. We have discussed that gravity and mass are not known correctly. Humans can levitate, and also pass through walls.

6.3 No Infinity

Infinity is a very important concept in mathematics. However, infinity is not there in both engineering and in nature. The characteristics of any mathematical theory that uses infinity will magically change completely if you replace infinity by any finite number, however small or large. We can illustrate it [Das, 2011a] using the Laplace Transform, a very commonly used tool in engineering and physics. There will be no more poles in transfer functions. Similar effects can be shown [Das, 2014b] for the Fourier Transform also. Uncertainty principle in quantum mechanics fails if you change infinity to a finite value [Das, 2013a]. The proposition that uncertainty is not correct and cannot be a limit has been verified experimentally by the researchers at the California Institute of Technology [CalTech, 2014].

There is no object of infinite size. An infinite size object will cover the entire sky, and we will not be able to see the sun light. Similarly there are no infinitely many finite size objects either, because that would also cover the sky. The total number of dust particles, the primordial matters, or root material particles is also finite; otherwise a soul would create an infinite size object using all of them. The total number of souls is finite, because they cannot be created or destroyed. Also, since the universe is periodic, it must be able to destroy itself on a finite duration, which can be done only when there are a finite number of objects.

6.4 How Mathematics Fails

Here is an example to show that mathematics will fail in all application to nature and engineering. This happens because mathematics violates the foundations of nature and engineering. As mentioned before, engineering is part of nature, because it uses objects of nature. A chair is made from the wood obtained from a tree, which is an object of nature.

Let us select Newton's First Law, which we still study in our high school science classes. Newton (1643-1727) said: "(1) In the absence of any unbalanced forces (2) an object will continue in motion (3) in a straight line (4) with a constant velocity" [Das, 2012a].

Have you ever observed any such object on earth or in space? No, of course you have never seen such an object. Item (1) in the law, is the assumption of isolated environment, which is impossible, because gravitational forces are always there. In the deep space and also on earth, the sum total of all gravitational forces from all objects of the universe, at every point in space, is non-zero, and is continuously changing in both magnitude and direction, because all objects in the universe are continuously moving. Thus item (4) of constant velocity cannot be true.

Since all objects are continuously moving, the item (3) is also not feasible; there is no straight line in the universe, as we have explained before. Thus Newton's first law is completely wrong, false, meaningless, and cannot work in nature. This has happened because Newton did not observe the nature, like Galileo did, and instead started with two assumptions (1) and (3). The following statements can be found in a physics textbook [Ferraro] about the Newton's first law:

"We could hardly sustain that this principle (First law) is a strict experimental result. On the one hand it is not evident how to recognize whether a body is free of forces or not. Even if a unique body in

the universe were thought, it is undoubted that its movement could not be rectilinear and uniform in every reference system.”

7.0 Physics Is Wrong

Observation Is the Only Way

At a very high level and from the philosophical viewpoint we can see that the physics is all wrong: First, we did not use the observation of the nature principle demonstrated by Galileo. And the second is the process that Stevenson demonstrated to us - we are created by nature ([Section 3.2](#)) and therefore we cannot understand the nature. Creations cannot know the creator; just like a robot cannot know the humans. Observing the nature, therefore, is the only way to find the truths.

Truths Cannot Be Created

Truths are the laws of nature [Das, 2019]. Being a part of nature we cannot create these truths. We must observe the nature to understand the nature. Krishna is the dominant character of Vedic classic books Mahabharat and Gita. He is a highest level yogi. There are many such yogis even in the modern world [Das, 2020b], who have demonstrated some features of Krishna. Anyone of us can become a man like Krishna by using meditation; we are all souls. Meditation is the only scientific process to learn directly about the nature. Krishna says – “I know everything, but no one can know me [Prabhupada: G.7.26]”. That means your soul knows everything but you cannot know your soul. Krishna is a soul. This Gita verse confirms the idea of Stevenson – creations cannot know the creator. Do not think that our ancient books, like Vedas and Bible, are wrong, instead we are all wrong in this Kali Yuga; and that is the objective of this article to prove. Our process is wrong and our tools are wrong also. Assumptions and experiments cannot lead us to truths. A robot cannot find the truths.

Thus we do not need to give more arguments to realize that physics is all wrong. However, another simple way to prove that physics is all wrong is to check that the physics uses mathematics extensively, without understanding the assumptions and problems of pure mathematics. Since mathematics is false, all subjects that use mathematics must also be false. False can never become true, no matter how you manipulate the false. Again, a subject is wrong means it cannot be used to describe the nature and engineering correctly.

Languages Are Wrong. In software and electronic hardware true/false are used for both adjectives and nouns, instead of truth/falsehood. We will use them synonymously. Moreover, is there a grammar in the universal language of telepathy? It does not appear so. A yogi or a UFO-ET can talk to animals, foreigners, humans clearly, completely, and without creating any confusion. Our oral languages are the best examples of all wrong subjects. Their use creates so much confusion and misunderstanding. The very fact that we have so many languages proves that nobody is happy with the languages of others. If our oral languages are wrong, then our mathematical language must be wrong too. In Sattya Yuga on earth, all yogis used telepathy, like the UFO-ETs.

Experiments Cannot Prove

As mentioned before, we have abandoned Galileo’s method of observing the nature, and instead started all our physics theories using assumptions, therefore all our physics results must be assumptions only. Since we have not verified the assumptions, none of our experimental results can be considered correct, and have validated the results of the theories. Even when the experimental results match the predictions of the theory, we still cannot say that the theory is correct. Nature and engineering automatically reject all assumption and thus invalidate the theory. We have seen how Newton’s first law failed because of the assumption of isolated environment. Newton has made the exact same assumption

for all three of his laws [Das, 2012a]. We now give another example to show how false assumptions create a false theory, and then how that false theory fails in its engineering application. Thus humans cannot create the laws of nature; and cannot even understand the nature.

7.1 GPS Design

We are all very familiar with the GPS technology, because most of our cell phones and cars use GPS receivers, which receive data from the satellites rotating around the earth. In physics there is a law called Kepler's law, which says that a satellite will rotate around the earth in an elliptical path, and then the law gives a mathematical formula to find the position of the satellite at any point in time. This formula did not work for GPS satellites. So, engineers, physicists, and mathematicians modified the law significantly but still could not make the Kepler's law work. Eventually the GPS ground system was used to directly measure and find the positions of the satellites, upload that data to GPS transmitters, which then broadcasted that data to our receivers to provide the desired accuracy. Even this did not work properly, so the ground station repeats the process every two hours or so, to maintain the accuracy requirements [Levitan].

Why did Kepler's law fail to work? The assumption ellipse is defined only on a plane of paper and around a stationary center point. But earth is moving around the sun, and takes the satellite with it. Thus the path of the satellite can never be an ellipse. There are other objects, like moon, and the other planets of the solar system, which also influence the position of the satellite. The sun is not stationary either, it is travelling along one of the spirals of our galaxy, that spiral is also rotating around the central core of the galaxy. Thus the path of the GPS satellite is immensely complex, beyond our imagination, and therefore cannot be translated using a simple symbolic language like mathematics. This example shows why our engineering is so full of patches and kludges. Consequently, our engineering cannot be reliable and safe at all.

The above GPS example shows that both mathematics and the classical physics are not good for nature and engineering. Most of the engineering systems use classical physics and none of them works. Interestingly, no engineer, mathematician, and physicists know that their subjects do not work. Probably even engineers also do not know that the failure of engineering is because of its theories. Everybody blames software and hardware of the computer systems. It does not appear that people know that everybody is just floating on their own boats. But you cannot deny that a false theory cannot work; and therefore you will definitely understand that the theories discussed here are all false [Das, 2019].

7.2 Quantum Mechanics Is Wrong

According to Heisenberg - "If there existed experiments which allowed simultaneously a sharper determination of p and q than equation (1) (Uncertainty relation) permits, then quantum mechanics would be impossible [Heisenberg, 1927]". This means if uncertainty principle (UP) is wrong then quantum mechanics (QM) will be wrong also.

It has been found that the UP is indeed wrong [Das, 2013a]. Subsequently CalTech institute performed an experiment that has shown [CalTech, 2014] that the bound presented by the UP can be defeated and therefore is not any limitation on measurements. Thus we can see that the QM theory cannot be correct. The basic idea is same everywhere, if you start with an assumption, your result will also be an assumption. An assumption will always remain false no matter how well you try to hide it by using sophisticated mathematics. No engineering experiment can prove a theory correct if it has any assumptions.

UP violates a fundamental principle, which humanity has believed for millions of years – and that is called destiny. The destiny means life is predetermined and perfectly predictable. So nothing can be uncertain in life. No amount of modern science can prove any of our ancient wisdoms, documented in

Vedas and Bible, can be wrong. Ancient results are based on third eye vision, which cannot be wrong, and has many direct and proven observations of nature. We have also given one example here.

It is very surprising that the physicists did not read the proof of UP. No one in the academia questions, or allowed to question, anything in physics. There is very common saying in the academia – “Do not question, just do the calculation”. All this started from the days of Galileo; Galileo had to go to jail because he produced a proof that contradicted the prevailing theory. The same tradition is still continuing – and everybody is scared.

UP assumed position and velocity are related by an integration formula, called Fourier Transform. If you have such an assumption then it is quite obvious that their variations will also be related, yet that relation was declared as UP, and a law of nature. Every theory should be thoroughly checked for all explicit and implicit hidden assumptions. If you do that then you will find everything will be wrong and the title message of this article will be validated.

Mark Wise is a leading theorist on particle physics beyond the standard model. He talked about the problem of where the masses of the elementary particles come from. He said - “We have been remarkably unsuccessful at solving that problem,” [Smolin: 8]. If theories are wrong then we cannot design any experiment, the error will become visible at some point in the chain of activities. False can never become true, no matter how you manipulate the false to hide it.

7.3 Special Relativity Is Wrong

Einstein makes two assumptions to define his principle of special relativity [Einstein, 1905]:

- (A) “The same laws of electrodynamics and optics will be valid for all frames of reference for which the equations of mechanics hold good.”
- (B) “The light is always propagated in empty space with a definite velocity c which is independent of the state of motion of the emitting body.”

“Examples of this sort, together with the unsuccessful attempts to discover any motion of the earth relatively to the light medium, suggest that the phenomena of electrodynamics as well as of mechanics possess no properties corresponding to the idea of absolute rest.” [Einstein, 1905]

Einstein seems to suggest in the above quote that the light medium of the MM experiment was a failure. Einstein also explicitly confirmed that thought in 1922.

Einstein said in 1922—“While I was thinking about this problem in my student years, I came to know the strange results of Michelson’s experiment. Soon I came to the conclusion that our idea about the motion of the earth with respect to the ether is incorrect, if we admit Michelson’s null result as a fact. This was the first path which led me to the special theory of relativity. Since then I have come to believe that the motion of the earth cannot be detected by any optical experiment though the earth is revolving around the sun [Einstein, 1982].”

But no experiment seems to have proven that the light speed is constant, Assumption (B). On the contrary there are results [Das, 2014c] that seem to suggest that MM experiment shows that Newton’s vector approach for addition of light rays produce null result validating MM.

Also in the above same paragraph Einstein seems to suggest that the absolute rest is not feasible. If that is the case then how can we define the origin of the inertial reference coordinate system?

We have shown here that there is no straight line in the universe, because all objects are constantly in motion. Yet, Einstein assumes existence of inertial reference frame, Assumption (A), which is a frame that moves at a constant velocity in a straight line. This is nothing but the result of the first law

of motion of Newton. Thus both assumptions are very closely related to Newton's theory, yet we claim that Einstein made a paradigm shift.

The first assumption alone should void the SR. There are no stationary points, no straight lines, and no coordinate systems in the universe. All engineering experiments will automatically reject such assumptions and make the experiments and results invalid. Thus even if the results match the theory they will still not prove the SR, because experiments rejected the assumptions.

7.4 Gravity Is Wrong

Our knowledge of gravity is inconsistent with the fact that human yogis can levitate themselves, move, walk, and fly defying gravity. There are many such examples all over the world even in modern times. UFO-ETs can also fly and they can make any ordinary human to fly with them. Thus Newton's gravitation concept and general relativity (GR) both must be wrong. Humans can pass through walls also, showing that our understanding of mass needs modification. Concepts of mass and gravity are thus inconsistent with GR.

Straight line requires infinite force, moment by moment, when the entire universe is moving. The particle must exert infinite force in the environment to go against the flow. Thus SR and GR both should exhibit infinity in their application examples. No geometry is feasible in nature, if we accept constancy of speed of light. Since SR is wrong and GR is based on SR then GR must be wrong also. A renowned theoretical physicist says "In nature, we have yet to encounter anything measurable that has an infinite value. But in both quantum theory and general relativity, we encounter predictions of physically sensible quantities becoming infinity." [smolin: 5].

7.5 Laws from Experiments

Double slit experiment (DSE) is considered a fundamental experiment that probably helped to generate the idea that particle can behave like a wave. But this experiment has an assumption that cannot be verified. DSE assumes that a single electron beam is used to create the interference pattern. But it is impossible to generate a beam of single electrons. We do not have any engineering technology to isolate a single electron from its neighborhood. This is equivalent to taking the Earth out of its orbit and taking it outside the solar system. First we do not have such a technology, even yogic power may not be able to do that. Even if we succeed in isolating the earth, the planet will not remain the earth. All humanity, plants, animals, even water will vanish from the earth. That is, the earth will become dead. For similar reasons the electron will not remain the electron any more.

Thus the isolated electron is very much like Newton's assumption of isolated environment. Thus the DSE cannot create wave representation of particles, just like Michelson Morley (MM) experiment cannot give constant velocity for light signals. It has been shown that we have made similar errors in Shannon's Capacity theorem [Das, 2009] and Heisenberg's Uncertainty principle [Das, 2013a].

Thus no experiment can generate any laws of nature. Nature cannot be understood by humans. We must observe the nature using the third eye vision, only then we can find the real cause for the effect. Mathematics is no good for nature and the laws of nature. There is no object in the universe that does not have a soul. Unless we treat nature using the soul theory we cannot know who we are, what we are doing here, and what we want.

8.0 Economics Is Wrong

We are all familiar with economics from the news media with information on politics, unemployment, poverty, wars, recessions, etc. But many of us probably do not know many fundamentals

of economics, which are not even mentioned in the mainstream macroeconomics textbooks. If you do the research, however, then you will find the truths about them. Some of them are the following.

8.1 Money Is Not an Object of Nature

(1) Like real numbers, money is false, because money is not an object of nature. Objects of nature are – humans, animals, trees, plants, roads, bridges, houses, computers etc. As an example, computer uses transistors, which use materials from the earth. (2) Since money is false, money must be free and abundant, at its source, which is called the central bank (CB). (3) Yet money supply is controlled. You cannot print money; you cannot get any salary you want. (4) Every country has a bank called the central bank (CB), which controls the supply of this free money. It is a private bank, and even governments cannot control this bank, because governments also take money from this bank. (5) Thus economy is not controlled by governments; it is not even designed by governments. It is planned, monitored, controlled, and manipulated by the central bank. Yet people blame elected political leaders like presidents, prime ministers, governors for the economic problems. This is how CB maintains its secrecy, and hides all transparency and accountability. (6) Most importantly money controls military, police, and intelligence (CIA, FBI). That is why Nobel laureate in economics, Milton Friedman said – “How to get rid of the Fed is an unsolved problem of the day [Levy].” The Fed is the CB of the USA [Das, 2011b]. (7) Since money is not an object of nature, money does not obey the laws of nature, violating the definition of truth (T1).

8.2 Root Cause Principle

In the abstract we have talked about two principles that guided our methodology for this article. Now we can state the third principle, called the root cause principle. It should be obvious that money is the root cause of all activities on our earth at this time of the Kali Yuga. Since money is false, therefore all activities must be false or wrong, because false can never become true no matter how you manipulate the false. We do not have to go any further; this root cause principle [Das, 2020a] is enough to justify completely the title of this article.

We have seen that some US presidents have said the same thing about economics. Nobel Laureate in economics and past chairman of the Fed, Ben Bernanke, was the first person to show how Federal Funds rate is manipulated to create the recessions [Das, 2011b].

Thus the fundamentals of the democracy are non-existent in the present economic system, yet in the name of democracy we are doing all the wars in the world. People can be fired at any time from their jobs, and they will not be able to survive. Where is the freedom or democracy then? Anybody can be killed also for any reasons, by anybody, who will have to obey that kill command; otherwise he or his loved ones will be killed. This is happening all the time all over the world also, only because of money. Nobody can pursue and find the reasons. If you chase the truth, you will be removed, just like Galileo was.

8.3 How Free Money Is Used Freely

Let us examine how our economy works. Can you justify why an apple is \$5? No, you cannot. It is completely arbitrary, because money value is arbitrary. You can say – labor cost is \$1, transportation is \$1, etc., and they all add up to \$5. But the question still remains. Why the labor cost is \$1 – you do not have an answer to that either. You cannot question also. You will be jailed if you do that. From a freelance prostitute, to a freelance researcher, to a PhD student in an elite university cannot ask questions. Again there is no freedom, labor union is not allowed. Money works like a gun. Whoever has the gun wins. We are all slaves, and afraid of losing our jobs. This is the most important feature of the life in the Kali Yuga. Note that it is not one life only, it is the same you, life after life. Because of reincarnation it is the same you that is here, was there, and will be there. You are the same Jesus who was there and crucified, and it is that same you who was there and covered your face in horror with your both palms.

Unless you create Moneyless economy (MLE), there is no escape. As a reminder, though, do not blame anyone, this is a perfect destiny example of death. Even Jesus knew that and he said about it also, See 9.2.3.

Major economic reasons may remain hidden. The economic data can also remain hidden. The real picture of the economy may never be known. Bloomberg news sued the Fed during 2008 economic crisis. This legal action was a rare incident. Ultimately the Fed revealed that it gave more than \$12T (trillion) to rescue the failed banks. At that time the US GDP was nearly \$14T [Das, 2013b]. Such huge amount of secret money can cause large economic problems, but all data, like inflation, remained hidden. That means, when we see economic crisis, we really cannot know what the real cause is. The situation can be similar for wars also.

8.4 New World Order (NWO)

The idea of creating a New World Order [Quigley] still seems to remain active. Thus who started the war and why, remains meaningless. But such a plan, although very desirable, may be devastating, and may not be feasible, considering the weapons of mass destructions that we have now. The economic system does not understand and cannot know the global destiny of the earth. Keynes circulated his views of the financial needs of another Great War [Eatwell], which seems to be very meaningful even today.

‘Every war should be of sufficient scale and duration: (a) Maximum spending by governments on war supply (b) Ration resources to industry and consumer for limiting non-war expenditure (c) Higher taxation of war incomes (higher salary) and excess profits (d) Deficit finance would play an irreducible role. Here the term of government borrowing had to be kept as long as possible. Tax revenues would never suffice to cover expenditure requirements.’

That is how British Empire was destroyed. US presidential candidate [Buchanan: 295] said in his book “As it was, Britain was dragged into an unnecessary war, which cost her nearly 400,000 dead, bankruptcy, and the dissolution of the British Empire”. Thus we can see that the war is needed by the economic system to steal, destroy, and control the wealth of other nations. But the NWO may not succeed as long as money is there. Only truth can survive for the longest period [Das, 2020a], as we have seen in the Sattya Yuga.

8.4 There Was No Money in the Sattya Yuga

The economy is designed to create rich people by stealing wealth from the others, but nobody is told about this process. People do not know that the root cause of all problems, including the wars, is the money. Keynes said the following about domestic economy (1920):

“By a continuing process of inflation, governments can confiscate, secretly and unobserved, an important part of the wealth of their citizens. By this method they not only confiscate, but they confiscate arbitrarily; and while the process impoverishes many, it actually enriches some. ... The process engages all the hidden forces of economic law on the side of destruction and it does it in a manner which not one man in a million is able to diagnose” [Keynes: 235-236].

You can see in above that Keynes says – “not one man in a million is able to diagnose”. Only very few people can understand the mechanisms of the economic system and the bigger picture. This is very much the approach for all subjects – on paper, they make the things very complicated. However the root cause concept is always understandable.

Almost hundred years back, as an example of eternal recurrence, an US President (1801-1809), Thomas Jefferson, mentioned the root cause principle [Ritholtz: 15]:

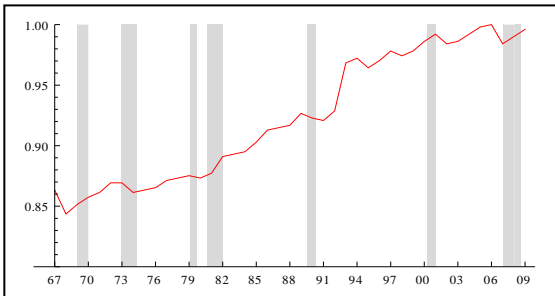

Fig.1 – Income of top fifth and Recessions

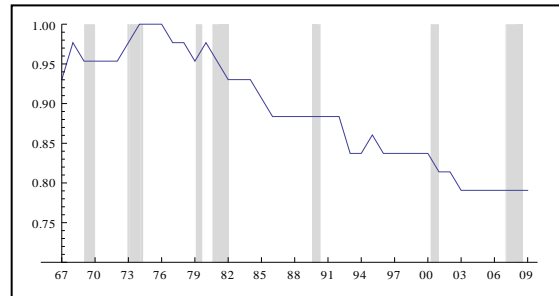

Fig.2 – Income of bottom fifth and

“If the American people allow private banks to control the issuance of their currency, first by inflation and then by deflation, the banks and corporations that will grow up around them will deprive the people of all their property until their children will wake up homeless on the continent their fathers conquered.”

This is now true for all countries on earth. Many other well known people, throughout the modern centuries, have said the similar things about the modern economy.

8.5 Globalization of Poverty

We can see how poverty is spreading all over the world. A true measure of poverty is the wealth gap between the richest and the poorest, and this is more than a trillion dollar. In sattya yuga there was no money, and yet there was a king named Ravan, who owned the entire solar system, his palace and city was made of gold. This is not a fiction; we have seen a modern yogi guru creating such a palace in Himalayas for initiating his one disciple. It was created to satisfy the past life karma of his disciple. The palace was removed after the completion of initiation [Das, 2020b].

We have taken the income data from US Census Bureau [USCB] for the above two graphs. The Figure-2 shows [Das, 2011b] the income of the bottom fifth of the population. The graph clearly shows that their income is consistently going downwards since 1976. The graph occasionally went up for short periods of time, like in 1967, '73, '94 etc. But it has an overall downward trend and every recession has a visible downward impact on the income. The graph of Figure-1 shows [Das, 2011b] the income of the top fifth of the population. It is clear that despite the recessions their income is growing persistently over all the years. The law of conservation shows that you cannot become rich without stealing from the others. Thus there is a truth in the statement that the rich is getting richer and the poor is getting poorer. The pursuit of wealth accumulation is meaningless, in the long run. There were so many great kings on earth; but their descendents are no longer rich. Destiny is the highest level law of the universe.

It is our economic system that may eventually create the destruction of our earth, since the root cause is money. We have seen the destruction of the environments. Now we will see probably a nuclear war. The wars are the necessary part for the survival of the economy. It is not the people, or nations, but the economy that is instigating and starting the wars [Quigley]. Majority do not understand the global plans, they are in the wrong, as the title suggests. But is this carnage necessary?

Tagore, a Nobel Laureate poet from India, expressed the feelings of two billion poor people all over the earth, in the following way. Although it was written when India was under the British rule, but it is still valid, and more now, for the people in poverty, the agony of their survival, in this money based economy:

“No happiness, all day all night, with slavery, wondering with broken hearts, all the time thousands of thoughts streaming, always in fear, in suppression, always heads down, with so much humiliation” [Tagore: Sukhahin].

9.0 *Destiny, Periodicity, and Yuga Theory*

As evident from the above observations on economics that the money and money power is the highest level controller, ruler, or autocrat of the earth. It has very long hands, and its hands reach every home. Everybody is scared of losing money, therefore will work for money as a most faithful slave. If you do something wrong, your friends, family members will be the first person to take you to jail, and this is called the Galileo Phenomenon.

In the same way destiny is the highest level truth and the law of the universe, which includes our earth and all the UFO-ET lands. Nobody can escape destiny, and moment by moment our soul is controlled by the destiny commands. Here also we obey these commands, without even knowing it. Destiny law is above the economic theory. Destiny has created the economic system in the Kali Yuga. So nobody can be blamed. There is no good and bad under destiny [Das, 2022]. As we have mentioned, in the Sattya Yuga there was no money, and no economic system. And that was the longest period with the happiest time on earth.

Yuga theory is described in Mahabharat story, which is written by Byasdev, he is also the author of the Gita. Byasdev is considered as one of the highest level seer yogis and is as good as Krishna. Thus this Yuga Theory must be very authentic and reliable theory. We have given an example of a modern seer yogi, Catherine. We have examined the authenticity of her powerful third eye vision. Only seer yogis can be trusted, and not anyone else.

Yuga theory has some obvious rationality from mathematical thoughts. We are familiar with waves in lakes, ponds, and oceans, etc. You may be able to conceive that if you add some smaller waves, like 10 cycles and 15 cycles, then you will find that the result will be another periodic cycle with longer period, longer than both 10 and 15 cycles. You can see a graphic example of this concept in [Rogness]. In this same way our reincarnation cycles add up to Yuga cycles of such long periods.

9.1 Number of Years in Yugas

In Mahabharat , Rishi Markandeya said,

“Four thousand years have been said to constitute the Krita (Sattya) Yuga. Its dawn as well as its eve, have been said to comprise four hundred years. The Treta-Yuga is said to comprise three thousand years, and its dawn, as well as its eve, is said to comprise three hundred years. The Yuga that comes next is called Dwapara, and it has been computed to consist of two thousand years. Its dawn, as well as its eve, is said to comprise two hundred years. The next Yuga, called Kali, is said to comprise one thousand years and its dawn, as well as eve, is said to comprise one hundred years. Know, O king, that the duration of the dawn is the same as that of the eve of a Yuga. And after the Kali Yuga is over, the Krita Yuga comes again. A cycle of the Yugas thus comprised a period of twelve thousand years. A full thousand of such cycles would constitute a day of Brahma. A same number is for one night of Brahma [Roy, Vol3: 397].”

Note: one human year, which is one circle around the sun, is a god day. One god year is 360 god days.

9.2 Characteristics of Humans Living in Different Yugas

We describe only two of the four Yugas here: Sattya Yuga and the Kali Yuga. Sattya Yuga shows that everything was true at that time and Kali Yuga has only 25% truth. We are in the Kali Yuga now. The following description is given by Hanuman of Ramayan story, who lived in both Treta and Dwapar Yuga, to Bhim of Mahabharat story. Hanuman was a highest level seer yogi, and is considered as an Avatar of Shiva.

9.2.1 In the Krita (sattya) Yuga

Do not think that these are myths. There are modern yogis in Kali Yuga who have demonstrated similar capabilities [Das, 2014a]. Again, from Mahabharat we find that in the Sattya Yuga,

“there were neither gods, nor demons, nor Gandharvas, nor Yakshas, nor Rakshasas, nor Nagas. And there was no buying and selling. And the Sama veda, the Rich veda, and the Yajus veda did not exist. And there was no manual labor. And then the necessities of life were obtained only by being thought of. And the only merit was in renouncing the world. And during that Yuga, there was neither disease, nor decay of the senses. And there was neither malice, nor pride, nor hypocrisy, nor discord, nor ill-will, nor cunning, nor fear, nor misery, nor envy, nor covetousness” [Roy, Vol3: 318].

We have explored the yogic power of the UFO-ET and their space craft. It is believed that such humanoids must have come from planets which are now in their Sattya Yuga. It is possible that they have come to help us or experience our impending catastrophe in our Kali Yuga. Some of the ETs have shown such visions of destruction to our earth abductees. We can see that there was no money in Sattya Yuga. There were no wars or lies also. It is the destiny that dragged us into Kali Yuga. So we are all responsible for this situation.

9.2.2 In the Kali Yuga

We are in the Kali yuga on earth at the present time. It started at the end of Mahabharat war, and after the death of Krishna. The book on Soul Theory, [Das, 2014b], gives some estimates of the time period of the end of Mahabharat based on the modern technology like – ocean level simulation analysis, under ground radar imaging, archaeological discovery of under ocean structures, and the carbon dating of artifacts found in the west coast of India, etc. About Kali Yuga, Mahabharat says:

“A quarter only of virtue abides. And in the beginning of this iron-age, Narayan wears a black hue. And the Vedas and the institutes, and virtue, and sacrifices, and religious observances, fall into disuse. And (then) reign of disease, and lassitude, and anger and other deformities, and natural calamities, and anguish, and fear of scarcity. And as the yugas wane, virtue dwindles. And as virtue dwindles away, creatures degenerate. And as creatures degenerate, their natures undergo deterioration. And the religious acts performed at the waning of the yugas, produce contrary effects. And even those that live for several yugas, conform to these changes [Roy, Vol3: 319]”.

Thus to make any changes to any system on our earth in this kali Yuga, all you have to do is wait for the time to come. Everything will automatically happen; you do not have any freewill or choices. You keep doing what your soul is telling you to do. “Your soul is always talking to you, listen carefully, and you will be able to hear”. That is the title message of the soul theory book [Das, 2014b]. Like in Vedas we see in Genesis [5:5, 6:3] of Bible that in the past some people used to live for 1000 years, whereas now they will live for 125 years only.

9.2.3 We Are Souls We Do Not Die.

Eventually we will go back to the Sattya Yuga, when Moneyless Economy will reappear (MLE) and therefore truth will also come back. In the mean time we must acquire the lessons and gain the experiences. We are not going anywhere; we will be together for eternity also. We were there in the many previous Sattya Yugas and in the many previous Kali Yugas; and our souls know that.

Nobody should feel frustrated; this is a part of the lessons of life. We all together created this destiny, by our act of simultaneity. This is the global plan and design. Thus we all are equally responsible. This is what Gita says:

(G.3.5) “Everyone is forced to act helplessly according to the qualities he has acquired from the modes of material nature; therefore no one can refrain from doing something, not even for a moment.”

Thus according to Gita, we are helpless, we are forced to act. Every moment we are guided by our soul. And this is true for both the masters and the slaves on this earth. Time will automatically come when a savior will be born and solve our problems using a major global war on earth. Again Gita conforms that:

(G.4.8) “To deliver the pious and to annihilate the miscreants, as well as to reestablish the principles of religion, I Myself appear, millennium after millennium.”

Here the word I means a highly powerful seer yogi, like Sri Ram in the Treta Yuga when we had 75% truths, or Sri Krishna in the Dwapar Yuga when truth was 50%. This is how periodicity, reincarnation, and simultaneity work. The word millennium is used for the translation of Yuga. So we must not blame anybody. We are all equally responsible. This is the law of nature.

This is the same feature of a single human life extended over Yuga cycles. We are born with new energy, grow to our maturity, sincerity, honesty, according to the Yuga of our time, then our body breaks down slowly and some disease catches on and kills us. But in Sattya Yuga there are no diseases, we simply cast off our bodies. Doctors will certify that the heart has failed. In sattya Yuga we lived for 1000, 10000, or even 100,000 years. Rishi Markandeya lived for over a million years spanning Sattya and Treta Yugas.

10.0 Education Is Wrong

We can safely say all subjects are wrong, because mathematics is wrong, physics is wrong, and money is wrong; and because all subjects use concepts from them. But then why are we using them to educate our people? There is no need to teach from these books because they can never be used in engineering. They are instead mainly used to discriminate people and create malice in the human values. People, who do not understand that the education is false, 99% of us, feel false pride about their certificates, professors, and institutions. Some of us pay lot more money than the others to acquire the same education from the same books. More you spend money more valuable is your education, and that has become the measure of quality.

Carroll Quigley (1910-1977) was a professor at Georgetown University, in Washington DC, in USA. He was also a mentor of US President Bill Clinton. He has written many books, one of them is “Tragedy and Hope, A history of the World in Our Time”. The book was banned at one time. This is probably the only book of history that integrates economics with history. Without knowing the role of money power, history or for that matter any subject can ever become meaningful. In his book he said [Quigley: 465] that England has two types of people – classes and masses. The education system for the classes has three negatives. One of them is that: “Education should not be aimed at finding the truth.” Thus we see that deep rooted in our societies is the plan that truth should not be told, discussed, and found.

Satyajit Ray (1921-1992), an Oscar winning film director from India, said in his fantasy film, (Hirak Rajar Deshe), the king of diamonds, “Burn all the books, fire all teachers, close the schools. More you teach them, more they learn, and more they disobey.” Correct education system cannot be implemented because we are in the Kali Yuga. However, a steady funding should be provided independent of the ruling political party and during economic good and bad times. At least some discipline will be experienced, and society will become peaceful. After all money is free at its source and data can remain hidden.

11.0 Engineering Is Wrong

11.1 Engineering is Unsafe

Engineering is wrong because it uses false mathematics, false physics, false science, and false money. That is why engineering is unreliable, unsafe, and pollutes the environment. Among all human activities, engineering is doing better mainly because it also uses objects of nature. Engineering also includes – medical surgery, cooking, etc. It should be noted that since science is false, therefore science cannot be considered as the foundation of engineering. Engineering always comes before science. Galileo created the telescope, which is engineering, to discover his theories.

Houses are the most common engineering product. But houses are so dangerous, particularly in the United States that it can be burned down completely by fire within two-three hours. Irony is that except the homeowners, everybody in the food chain makes money, every time a house burns. Fire insurance companies will be able to increase insurance rates in the entire neighborhood. Contractors will get money and jobs to rebuild the community, building materials will be in high demand, their stock market prices will go up. Fire department will make more money from overtime work. Only environment will be significantly destroyed. You cannot stop burning houses, because all these businesses will be ruined.

Automobile is another major engineering product. In USA alone, more than 40,000 people died in car accidents in 2021 [Simon]. We created a faulty car and gave that to people to kill that many people a year. This, in no way should be called a society of advanced technology. But take a look at who gains from the automobile business: Accident insurance companies, lawyers who resolve the accident court cases, auto repair body shop companies, car parts companies and the auto manufacturers, hospital emergency departments, doctors, nurses, etc. This is a big business empire. Who is paying for all these - the car owners, who are at the bottom of the economy, even though money is free? Besides, fatalities there are many wounded victims, handicapped passengers, family members suffering from loss of loved ones. A complete misery, a true picture of Kali Yuga! Destiny says we must go through this process to understand the truths of life. We do not have freewill or choices. Look at the destiny and inside operation of a corporation in [Section 5.1](#). As mentioned before you cannot stop car accidents; all these businesses will starve to death.

11.2 Medicine – Cause and Effect, Variants, Placebo

Medicine industry does not know and recognize the concepts of soul theory. As a result they are making some fundamental errors. For example, they do not understand and cannot explain the placebo effect. There are humans who do not get sick when exposed to diseases. A yogi has demonstrated that he can survive after seeping potassium cyanide [Das, 2020b]. These people should have a name, placebo people or yogis (Y1). There are similar people who can be cured by fake medicine, called placebo drugs (P). If you cannot explain how they are getting cured or not getting sick, then you cannot also explain why people are getting cured by medicines (M). Can we not then say medicine effect is nothing but placebo effect for such (M) people? *Since soul is the root cause, by definition, then it is the soul that creates the diseases and it is also the same soul that cures and protects the people.* And these are part of the destiny of the individuals.

Some times when a medicine fails or begins to fail, drug companies say, different variant of the virus has appeared. Have you ever seen two identical apples? No, no two objects in the universe are identical, just like no two humans are identical. Therefore no two virus elements can be identical also. Thus the same medicine will not give the same results for everybody, i.e. no two effects are identical. There is no average person or average apple. We have seen, mathematics (averaging process) is wrong.

Here we should remember what Nietzsche said – essentially mechanical approach is essentially a meaningless approach.

The cause and effect law is a very important feature of the soul theory [Das, 2022]. Without any cause something cannot happen. Our ancient books like Bible and Vedas talk about this principle. Newton also gave us a simplified version of it: every action has an equal and opposite reaction. This is not correct, every action has multiple reactions, because we are not living in an isolated environment, as Newton assumed. Thus without proper understanding of the cause and effect relations we cannot know why medicines are working for some and not for all people. And what is working is medicine, or something else, cannot also be known.

Because of reincarnation law we are our own ancestors, we are the same people who lived in Sattya Yugas. Souls cannot be created or destroyed. Thus the same souls exist in the universe for eternity. So our souls know all the truths, it is the destiny that prevents us from telling us what we know. We can see that at present time, some rare people (Y2) among us are very high level yogis and can tell some of the truths, but the majority is still wrong. Mark Twain, Rabindranath Tagore, Friedrich Nietzsche are such rare people. We have to wait patiently, maybe even life after life, for many lives, to realize such truths and peace that they have earned.

12.0 Upanishads Are Wrong

Most of the Upanishads are wrong because of their two problems: (1) They contradict Samkhya, which is the most authentic source in Vedas and (2) They are self contradictory. We illustrate these two problems here, using the examples from Brhadaranyaka Upanishad [Madhavananda] which also talks about the Karma Theory. Therefore the Karma theory must be wrong and cannot be trusted [Das, 2021]. Upanishads appear to be not written by seer yogis; the results of one seer yogi cannot contradict the results of another seer yogi. The laws of nature cannot contradict. All Upanishads may be the products of the early period of Kali Yuga.

12.1 BU Contradicts Samkhya

I-ii-1: “There was nothing whatsoever here in the beginning. It was covered only by Death (Hiranyagarbha), or Hunger, for hunger is death. He created the mind, thinking, ‘Let me have a mind’. He moved about worshipping (himself). As he was worshipping, water was produced. (Since he thought), ‘As I was worshipping, water sprang up’, therefore Arka (fire) is so called. Water (or happiness) surely comes to one who knows how Arka (fire) came to have this name of Arka.”

This verse I-ii-1 of Brhadaranyaka Upanisad (BU) says “In the beginning there was nothing whatsoever.” Thus according to BU universe was empty. But Samkhya says and also proves that the universe is filled with two kinds of eternally existent particles: root material cause particles (matter) and root efficient cause particles (soul). Samkhya also states the law, which we have discussed before: nonexistent cannot become existent [Das, 2022]. Thus BU violates this Samkhya law. Since Samkhya is created by the highest level Seer Yogi (Drashta), therefore BU must be wrong and should not be used to learn about the nature of our life. We have also seen that the destiny law is eternally existent along with the memory in the universe. Thus there was no beginning, no ending, the universe was eternally existent, and therefore universe was periodic.

Swami [Krishnanada] says, BU introduces the concepts, in some mysterious ways, from the Samkhya theory, to explain this verse I-ii-1 and writes: “For the birth of the individual, the universal has to die. Very strange, indeed! We cannot understand what this means.”

Here is another BU verse that contradicts Samkhya theory:

I-iv-3: “He was not at all happy. Therefore people (still) are not happy when alone. He desired a mate. He became as big as man and wife embracing each other. He parted this very body into two. From that came husband and wife. Therefore, said Yajnavalkya, this (body) is one-half of oneself, like one of the two halves of a split pea. Therefore this space is indeed filled by the wife. He was united with her.”

This BU verse says that “He parted this very body into two.” This concept contradicts Samkhya, which says a soul cannot be broken into pieces. If you break the body into two parts, each part will require their own individual soul; otherwise the body parts will not survive. Samkhya says every object is created by its own individual soul.

Swami [Krishnanada] writes “Here, again, a highly symbolic truth is stated to explain the state of affairs after creation was effected”. When we fail to explain, it seems, we say - truth is told using a symbolic language. But according to Samkhya this is not a truth.

12.2 BU Is Self-Contradictory

I-iv-10: This (self) was indeed Brahman in the beginning. It knew only Itself as, ‘I am Brahman’. Therefore It became all. And whoever among the gods knew It also became That; and the same with sages and men. The sage Vamadeva, while realizing this (self) as That, knew, ‘I was Manu, and the sun’. And to this day whoever in like manner knows It as, ‘I am Brahman’, becomes all this (universe). Even the gods cannot prevail against him, for he becomes their self. While he who worships another god thinking, ‘He is one, and I am another’, does not know. He is like an animal to the gods. As many animals serve a man, so does each man serve the gods. Even if one animal is taken away, it causes anguish, what should one say of many animals? Therefore it is not liked by them that men should know this.

The BU verse I-iv-10 says, “This (self) was indeed Brahman in the beginning.” This verse clearly contradicts the previous verse I-ii-1, which says the universe was empty in the beginning. The author Swami [Madhabananda] says, while explaining verse 1.iv. 10. - “Therefore the conclusion is that the word 'Brahman' refers to that Brahman which projected the universe and entered into it.” This is the notion of God in the Upanishads. Whatever the meaning of Brahman is, the existence of something contradicts the creation theory of emptiness defined by verse 1-ii-1. We have also established in this article that there is no God according to Vedas.

Thus it appears that BU is not written by a person who can be considered as knowledgeable in Samkhya and therefore the Vedas. Any concept presented in BU therefore cannot be considered as correct. Many sentences in these verses are questionable and debatable.

For example – “It was covered only by Death..” that may mean there was life before and everything is now death. “He created the mind..” who is this he, where did this he come from, if in the beginning it was empty, how did he create, where is the mind (Sanskrit word Atman has been used, which cannot be created), etc. “I am Brahman” How can a self know this in the beginning without going through several life cycles? You will not find such inconsistency and ambiguity in the Samkhya. Samkhya is self-contained and complete. Samkhya demonstrates the nature and capability of the highest level of third eye power.

13.0 Karma Theory Is Wrong

All objects in the universe are simultaneously and continuously interacting with each other for eternity. Such interactions prevent any type of freedom. If anything moves then everything moves. This creates the destiny law. ‘None of us have any power to break the bond of this destiny’ [Tagore: Bidhir Bidhan]. Destiny has been well established in the literature [Das, 2013c].

On the other hand, the Karma theory assumes that all humans are individually operating, independently, and in an isolated environment. Therefore, Karma theory assumes, wrongfully, the existence of freewill, choices, and God. It is shown that it is a law of nature that no one, including God, can have freewill and choices. It is also a law of nature that every object in the universe is created individually by its own individual soul and according to its own individual destiny. We point out an example proof in [section 3.2](#). And therefore there is no God that created the entire universe. We have seen that God and destiny are contradictory concepts. Mahabharat also says, in section 9.2.1, that in the Sattya Yuga, when we knew 100% truths, there were no Gods.

Karma theory came from Upanishads. We show, in [section 12.0](#), that Upanishads cannot be considered as part of Vedas, and therefore cannot be trusted. Upanishads not only contradict Samkhya and Gita, they are self-contradictory also. Upanishads are not written by seer yogis. We have seen that the scientists of Kali Yuga, like Newton (Classical physics), Heisenberg (Quantum mechanics), and Einstein (Special relativity) failed to create truths. They did not observe the nature like Galileo. Without observation, nature cannot be understood. In this section we extract two ideas from Gita: (A) *What Gita says about karma* and (B) *How karma theory contradicts Gita*.

Synonyms - In Gita all of the following words are synonyms for soul: {spirit, atman, me, my, I, self, Krishna, Brahman, God, Iswar, Lord, Supreme Lord, super soul}. If you replace all of them by soul then you will find that Gita will become more consistent and meaningful [Das 2014a].

13.1 What Gita Says about Karma

In this subsection we collect some verses from Gita that show (1) the definition of karma (2) that the soul performs all activities (3) that all activities are part of a global plan, called global destiny, (4) and that any highest level seer yogi like Krishna knows the details of that global destiny. The major conclusion here, similar to what some modern scientists say, will be that the life is completely planned, moment by moment, and all of us work just like robots. There are examples in [Das, 2014b], that prove such a phenomenon.

13.1.1 The Definition of Karma

All actions performed by the material bodies are called karma. Here soul is same as Brahman, atman, or the self.

[G.8.3] The Supreme Personality of Godhead said: The indestructible, transcendental living entity is called Brahman, and his eternal nature is called adhyatma, the self. Action pertaining to the development of the material bodies of the living entities is called karma, or fruitive activities.

13.1.2 We Are Controlled by Our Soul.

The following verse confirms that our soul does everything. That means our physical bodies, brains, and minds cannot make any decisions. This is the same idea mentioned in Samkhya. An observational proof is recorded in [Green]. Our activities are performed by our soul and not by our mind. Soul is the root cause.

[G.18.61] The Supreme Lord is situated in everyone's heart, O Arjuna, and is directing the wanderings of all living entities, who are seated as on a machine, made of the material energy.

13.1.3 We Are Controlled by Destiny.

This verse says that the global plan or destiny is known by Krishna, a highest level seer yogi. It points out that our activities are already planned even before we are born and is known to everybody. Any human being has the ability to acquire such third eye power, see [Section 3.1](#).

[G.7.26] O Arjuna, as the Supreme Personality of Godhead, I know everything that has happened in the past, all that is happening in the present, and all things that are yet to come. I also know all living entities; but Me no one knows.

Observe that both soul and destiny control us, the reason being destiny has been created by all the souls working together simultaneously, and soul reads the destiny command for us, from the memory, and then gives it to the mind, which then controls the brain. Mind is in the subtle body, see Samkhya [Virupakshananda].

13.2 Karma Theory Contradicts Gita

In this subsection we identify the verses from the Gita that show how karma theory is inconsistent with the Gita verses. Since the Gita is one of the most authentic sources, and at much higher level than Upanishads, therefore the karma theory should not be recognized. This karma theory is created by people who did not do rigorous research on Vedas, more specifically they were not knowledgeable about Samkhya, and they were not drashta yogis (third eye power). We find the following contradictions with Gita. Such concepts can be found in the karma theory. We do not discuss karma theory, since something that is false can never be described. False can never become true, no matter how you describe them. In here we should remember the synonyms of soul mentioned before.

(1) Gita says there is no God. (2) No choices of your karma. (3) You cannot stop reincarnation. (4) Even Krishna reincarnates. (5) There is no good and bad karma. (6) There is no tit for tat. (7) Eternal recurrence is a law.

13.2.1 There Is no God

According to Samkhya there is no God that created the universe. We have also shown that the destiny law and God are contradictory concepts. Therefore God as the creator of the universe is not a valid concept, that is, God does not exist. Thus Brahma, Vishnu, Shiva, Rama, Krishna, etc., if they exist, should be considered as the highest level yogis. We have given an observational example to show how a soul, and not God, manufactures a human baby, ([section 3.2](#)). The following Gita verse says that Krishna is not God. Krishna compares himself with the Kapila muni in terms of knowledge and does not say he created Kapila.

[G.10.26] Of all trees I am the banyan tree, and of the sages among the demigods I am Narada. Of the Gandharvas I am Citraratha, and among perfected beings I am the sage Kapila.

Samkhya states that soul is the efficient root cause and is different from the root material cause. Here is a corresponding Gita verse. Thus God is not the creator as assumed by the karma theory.

[G.11.37] O great one, greater even than Brahma, You are the original creator. Why then should they not offer their respectful obeisances unto You? O limitless one, God of gods, refuge of the universe! You are the invincible source, the cause of all causes, transcendental to this material manifestation.

13.2.2 No Choices for Karma

During the living period we cannot have freewill and choices, as mentioned before. The following verse confirms that feature of life. This is a consequence of the destiny law mentioned in Gita. Modes of material nature are the three properties of the root material particles – knowledge, ignorance, and energy. They are continuously adjusted by soul according to the destiny of the moment.

[G.3.5] Everyone is forced to act helplessly according to the qualities he has acquired from the modes of material nature; therefore no one can refrain from doing something, not even for a moment.

13.2.3 No Choices after Death

Next life begins, where the present life ends. Our engineering software is designed based on this principle. We save the present state before switching the task, and restore the state when we come back from the interrupts. There are many examples of predictions of place and time of birth of many people with special features. Birth of Krishna and Ram of Ramayana were also known. Destiny law says every event is precisely predictable long before you are born. So we cannot have any freewill and choices at any time, as assumed by karma theory.

[G.8.6] Whatever state of being one remembers when he quits his body, O son of Kunti, that state he will attain without fail.

13.2.4 You Cannot Stop Reincarnation

The liberation idea of karma theory therefore cannot mean stopping the cycles of reincarnation. After all, we do not have freewill also. Karma theory therefore wrongly assumes you can stop reincarnation.

[G.2.27] One who has taken his birth is sure to die, and after death one is sure to take birth again. Therefore, in the unavoidable discharge of your duty, you should not lament.

13.2.5 Even Krishna Reincarnates

You cannot stop your reincarnation, because you are guided by a global plan. Your presence in the universe is needed by others. We can see that Krishna, a highest level yogi, comes back reincarnation after reincarnation.

[G.4.5] The Personality of Godhead said: Many, many births both you and I have passed. I can remember all of them, but you cannot, O subduer of the enemy!

13.2.6 There Is No Good or Bad Karma

A person who has perfect knowledge, that is, who understands the truth, cannot suffer from any good or evil actions. To him there is no such thing as good or evil. If you perform a careful analysis of cause and effect then you will find that the person is not responsible for the action or in other words the entire system is responsible [Das, 2022]. That is the fundamental principle behind the destiny law. The following Gita verse [G.2.57] confirms this knowledge basis.

[G.2.57] In the material world, one who is unaffected by whatever good or evil he may obtain, neither praising it nor despising it, is firmly fixed in perfect knowledge.

Acquiring the knowledge about truth is the ultimate goal in life to overcome all problems in life. Suppose, a man is a thief and everybody is calling him as an evil person. Let us ask him some questions to understand why he is not evil. Why he is stealing, because he is poor. Why he is poor, because he does not have a job. Why he does not have a job, because the city cannot provide a job for him. You can then see that the man is a thief because the city is responsible for it, the entire government is responsible for it. If you can create moneyless economy (MLE) [Das 2012d] then clearly nobody will steal. Thus if you know the truth, or the laws of nature, then you will never be a sinner no matter what you do. The following verse [G.4.36] justifies this principle.

[G.4.36] Even if you are considered to be the most sinful of all sinners, when you are situated in the boat of transcendental knowledge you will be able to cross over the ocean of miseries

Thus a person having the true knowledge [G.5.18] will never think that a person can be sinner. To him everybody is same, and he will never compare any two persons, just like we do not compare apples and oranges.

[G.5.18]The humble sages, by virtue of true knowledge, see with equal vision a learned and gentle brahmana, a cow, an elephant, a dog and a dog-eater (outcaste).

Nobel Laureate Poet Rabindranath [Tagore: Amar Chokhe] said the same thing in one of his poems – “In my eyes everything is beautiful, young, and unspoiled. Blue sky, dark forest, bright moonlight, soft flower, everything is like me.”

13.2.7 There Is no Tit for Tat

Life is periodic in nature. Same event happens over and over again. Earth goes round the sun every year. Sita was kidnapped by Ravan in the Ramayan story, a million years back; even today hundreds of married women are being kidnapped. Mr. X did bad things to Mr. Y and then some other event produced bad results for Mr. X. This is not tit for tat on Mr. X. People are always doing bad things to somebody. These are all periodic events and a law of nature. The following verse [G. 2.47] shows that there is no tit for tat concept in Gita. You cannot expect the results that you desire. Destiny determines what will happen. Thus consequence of Karma is meaningless. We are simultaneously connected.

[G.2.47] You have a right to perform your prescribed duty, but you are not entitled to the fruits of action. Never consider yourself the cause of the results of your activities, and never be attached to not doing your duty.

13.2.8 Eternal Recurrence

The following verse describes destiny law in Gita. It is valid for every soul, individual, society, nation, planet, solar system, galaxy, and even for the universe. It says destiny law controls everything, you and I do not. Therefore, we cannot be individually responsible or in other words we can say that together we are all equally responsible. The eternal recurrence is a consequence of periodicity as explained in the destiny subsection. Your body is working under the command of your soul.

[G.9.10] This material nature, which is one of My energies, is working under My direction, O son of Kunti, producing all moving and nonmoving beings. Under its rule this manifestation is created and annihilated again and again.

Remember, as we have mentioned many times, destiny is not God. Destiny can be predicted exactly by any seer yogi before the events happen. But God cannot be predicted by definition.

Conclusions

We have discussed in this article various principles to analyze why everything is wrong on our earth at this time of our life. (1) The highest level principle is that it is the destiny law which has created the Yuga cycles. In this cycle we are in the Kali Yuga now, which started with 25% truth. Then inside the Kali Yuga we have used many other destiny laws of local space and local time. (2) We have discovered that almost all subjects started with some assumptions. Thus all derived results of those subjects must be assumptions only, and therefore they must be all wrong. (3) Then we found that experiments also cannot verify the truths of our theories. This is so because all engineering experiments automatically reject all assumptions. Moreover, engineering adds more assumptions also. Therefore, such verifications are meaningless. Finally, at a global level on earth (4) destiny has created money which has no existence in nature. Thus, since money is false, everything derived using money must be false also. Therefore, our

entire system of all subjects must be all wrong. Most people do not know that as a fact, but some people definitely know the truths, they are very rare, and do not speak out because they are afraid of the Galileo phenomenon. Thus we conclude that the majority of our population thinks, and wrongfully, that all subjects and theories are correct. Only a small minority of population knows that all subjects are wrong. We have given many such wrong examples from modern times in this article.
